- ▶ Comparison of peak energies for different angles

Background of the PS scintillator with coincidence and random coincidences (measur. time 13.4h and 1h)

Energy of electrons: Rate of coincident events of PS scintillator at angle of $\theta = 90^\circ$

Energy of electrons: Rate of coincident events of PS scintillator at angle of $\theta = 15^\circ$

Background of NaI scintillator with coincidences (measur. time 62h)

Energy of photons: Rate of coincident events of NaI scintillator at angle $\theta = 30^\circ$

Energy of photons: Rate of coincident events of NaI scintillator at angle $\theta = 90^\circ$

Now to the result: combining all those peaks...
