Table of Contents

Calibration of PS scintillator

Calibration of Na scintillator

Energy Conservation

^{22}Na sample (measurement time 16.5h)

^{137}Cs sample (measurement time 6h)

Linear fit

Peaks and fitting results of ^{137}Cs

Name	Energy	Channel
Photo peak	662 keV	8040.59 ± 0.03
Compton edge	477 keV	5720 ± 4
Escape peak	183 keV	2510 ± 12

^{137}Cs sample (measurement time 2.7h)

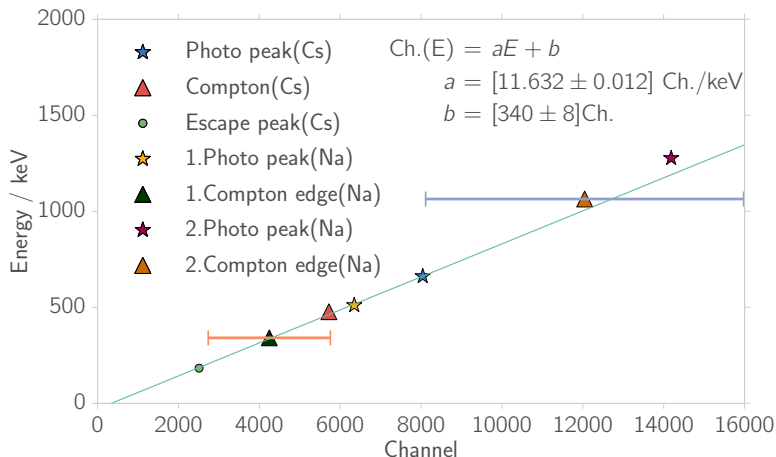

Peaks and fitting results of ^{22}Na

Name	Energy	Channel
1. Photo peak	511 keV	6347 ± 3
2. Photo peak	1277 keV	14180 ± 20
1. Compton edge	341 keV	4000 ± 2000
2. Compton edge	1064 keV	12000 ± 4000

^{22}Na sample (measurement time about 1h)

Linear fit

Energy Conversation

- Comparison of peak energies for different angles

Background of the PS scintillator with coincidence and random coincidences (measur. time 13.4h and 1h)

Energy of electrons: Rate of coincident events of PS scintillator at angle of $\theta = 90^\circ$

Energy of electrons: Rate of coincident events of PS scintillator at angle of $\theta = 15^\circ$

Background of NaI scintillator with coincidences (measur. time 62h)

Energy of photons: Rate of coincident events of NaI scintillator at angle $\theta = 30^\circ$

Energy of photons: Rate of coincident events of NaI scintillator at angle $\theta = 90^\circ$

Now to the result: combining all those peaks...
